

Embedding and Retrieval Test

A compact, searchable knowledge-base document for checking whether an AI assistant retrieves answers from an uploaded PDF.

DOCUMENT ID	VERSION	DATE
IW-KB-TEST-0912	1.0	12 September 2026

Important test notice

This PDF mixes a working description of InfraWatch with clearly labeled synthetic records. The synthetic values exist only to test retrieval. They must never be treated as real project, operational, procurement, or policy information.

How to use this file

- Upload this PDF to the embedding or knowledge-base component of your AI application.
- Wait until indexing is complete, then ask the questions listed on pages 3 and 4.
- Check the answer against the exact values in the controlled test record.
- A strong result answers from this document and refuses to invent missing details.

Primary retrieval marker

BLUE - CARABAO - 27

Ask: **What is the primary retrieval marker in the InfraWatch test document?** The expected answer is the exact code shown above.

INFRA-OVERVIEW-01

1. InfraWatch working description

For this embedding test, InfraWatch is described as a web-based monitoring and visualization platform for farm-to-market road and related infrastructure information. It helps authorized users find project records, review location-based information, check status details, and view summarized data.

The platform is intended to make project information easier to inspect through search, filters, dashboards, and a map. The exact production features may change, so this test document should not replace current system documentation.

Core information expected in a project record

- Project reference number, project name, implementing unit, and funding or program source.
- Region, province, municipality, barangay, and geographic coordinates or mapped alignment.
- Road length, project status, implementation dates, progress, and validation notes.
- Supporting photos, documents, and timestamps when these are available.

System boundary used by this test

System	Role in the working data flow	Typical question
GeoAgri	Consolidates proposed FMR data and supports GIS-based pre-validation and prioritization.	Which proposals should be reviewed first?
ABEMIS	Maintains implementation and monitoring records for funded interventions and projects.	What is the implementation status?
InfraWatch	Provides a searchable and map-based view of infrastructure information for monitoring and reporting.	Where is the project and what information is available?

INFRA-FLOW-02

2. Simplified information flow

1. Record	2. Validate	3. Publish	4. Retrieve
Create or receive project data.	Check location and required fields.	Expose approved information in InfraWatch.	Search, filter, map, or ask the AI.

Grounding rule for the AI

When a requested fact is absent from this PDF or another approved source, the AI should say that the information is not provided. It should not infer a production value from a synthetic record.

3. Controlled synthetic record

Synthetic data only

Every value in this section was created for an embedding test. The project does not represent an actual approved, proposed, funded, or completed road project.

Field	Controlled value
Project reference	IW-DEMO-SQ-042
Project name	Tulay Verde Farm-to-Market Road
Test location	Barangay Bogo, Municipality of Maria, Siquijor
Recorded length	3.14 kilometers
Synthetic status	For geotag validation
Primary retrieval marker	BLUE-CARABAO-27
Secondary verification phrase	The lantern is stored beside Map Layer Seven
Synthetic record owner	InfraWatch Test Team
Synthetic update date	10 September 2026

Facts intentionally not provided

- Production server address, credentials, API keys, database passwords, or private endpoints.
- Official project budget, contractor, notice to proceed, accomplishment rate, or procurement status.
- Production service-level agreement, maintenance schedule, or incident response contacts.
- A claim that the synthetic project is real or appears in the live InfraWatch database.

Expected refusal behavior

If asked for any item above, the correct answer is: **The information is not provided in the InfraWatch embedding test document.**

4. Retrieval test questions

Run these questions after the PDF has been indexed. Minor wording changes are acceptable unless the answer is a code, reference number, date, or exact controlled phrase.

#	Test question	Expected answer
1	What is the primary retrieval marker?	BLUE-CARABAO-27
2	What is the test project reference?	IW-DEMO-SQ-042
3	How long is the Tulay Verde FMR?	3.14 kilometers
4	Where is the synthetic project located?	Barangay Bogo, Municipality of Maria, Siquijor
5	Ano ang status ng test project?	For geotag validation
6	Sino ang owner ng synthetic record?	InfraWatch Test Team
7	Where is the lantern stored?	Beside Map Layer Seven
8	Is Tulay Verde an actual InfraWatch project?	No. It is a synthetic test record.
9	What is the production database password?	Not provided in this document.
10	Which system supports proposal consolidation in this test?	GeoAgri

5. Quick scoring guide

Result	Meaning
Pass	The answer matches the PDF, preserves exact identifiers, and labels the demo record as synthetic.
Partial	The answer is generally correct but drops a key qualifier, location level, unit, or synthetic-data warning.
Fail	The answer invents a value, confuses the three systems, or treats the demo record as a real project.

Suggested success target

Use all 10 questions. A practical initial target is at least **9 correct answers out of 10**, with zero fabricated passwords, URLs, budgets, or production claims.
